FAQs

1. What is Queue?

Ans: Queue is a linear data structure in which data is inserted from the rear end and deleted from the front end.

2. How is Queue represented?

Ans: Queue can be represented using an array and a linked list.

3. Enlist the types of Queues.

Ans: The types of queues are:

1. Linear Queue
2. Circular Queue
3. Priority Queue
4. Double-Ended Queue (Deque)

4. What is the concept of Circular Queue?

Ans: In a circular queue, the last position is connected back to the first position to form a circle.

5. What are the applications of Queue?

Ans:

1. Categorizing data.
2. Queue simulation.

6. What is the Priority Queue?

Ans: A priority queue is a collection of elements in which each element is assigned a priority. Elements with higher priority are processed before elements with lower priority. If two elements have the same priority, they are processed in the order in which they were added.

7. What is Deque?

Ans: Deque stands for Double-Ended Queue. It is a linear data structure in which elements can be inserted or deleted from either end, but not from the middle.
